The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply		
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Paraschac US h1745. Paraschac discloses a device for clamping tissue comprising a first and second handle, first and second jaw members, a first elongated electrode (147) and a second elongated electrode (148). Paraschac teaches all of the limitations of the claims except the width of the clamping surface exclusive of the width of the tissue-contacting portion of the first electrode being substantially wider than the width of the tissue-contacting portion. Column 7 lines 3-4 of the Paraschac disclose that reducing the active electrode (the tissue contacting portion) causes the electrical fields to focus and produce speedy coagulation. In view of this teaching, it would have been obvious to one of ordinary skill in the art at the time the invention was made to construct the clamping surface such that the width of the clamping surface exclusive of the width of the tissue contacting portion of the first electrode being substantially wider than the width of the tissue contacting portion, since it has been held that changing the size of the parts of a device only involves routine skill in the art.

Application/Control Number: 10/038,506

## Response to Arguments

Applicant's arguments filed May 24, 2005 have been fully considered but they are not persuasive.

In contrast to the argument that, Paraschac teaches away from a treatment zone that is substantially narrower than the width of the jaws clamping surface, the disclosure in column 7 lines 3-4 of Paraschac state that in reducing the active electrode size the electrical fields are focused and this speeds coagulation.

Moreover, Applicant's arguments that:

The structure of Paraschac intentionally teaches a wide treatment zone, which essentially cauterizes the entire lateral extent of tissue, disposed between the jaws;

Paraschac expressly teaches that the treatment zone must be wide enough to extend on either side of the knife-cutting channel for cutting by the knife;

Paraschac consistently requires that the hemostatic treatment zone must be slightly wider than the clamping surfaces of each jaw so as to provide visual feedback to the surgeon outside of the jaws when the jaws are clamped; do not preclude the fact that Paraschac explicitly discloses that the size of the

Applicant also argues that Paraschac does not teach or suggest that the jaws are parallel through a range of clamping spacing. It is the Examiners position that the jaws

active electrode (the tissue contacting portion) can be reduced.

Application/Control Number: 10/038,506

Art Unit: 3739

of Paraschac do become parallel at different points throughout the range of motion of the jaws, this is illustrated in figure 7 where jaws in the image are clearly parallel.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rosiland S. Rollins whose telephone number is (571) 272-4772. The examiner can normally be reached on Mon.-Fri. 9:00 AM - 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda C. Dvorak can be reached on (571) 272-4764. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
